For 6 weeks within the summer months, 10 Yonkers high school students work within the CURB lab doing extensive research of the bacterial counts of the Hudson River at the Yonkers Paddling and Rowing Club dock next door (as seen in the photo above).

This years Blue Team are inviting the public community to visit CURB to learn, play, and explore with interactive activities for all ages. This event has been organized and planned by the students themselves!

Starting at 12pm, interested persons can join in on the fun in the CURB backyard for an environmental day of exploration.

Help us support our students by sharing the attached flyer. To register for event, please scan the QR code to the left.

All activities are first come first served.  
We can't wait to see you by the river!

## (DATA):

Most Probable Number (MPN) of Colony Forming Enterococcus Bacteria per 100ml sample. EPA recommends public notification and possible temporary beach closure for single Enterococcus samples above 60 cells/100ml. Samples testing above this threshold appear in **red** on the Riverkeeper website, while those below it appear in **green**. To avoid exposure to chronic contamination, the geometric mean, a weighted 30-day average, should not exceed 30 cells/100ml. To avoid exposure to occasional high levels of contamination, no more than 10% of samples should exceed 110 cells/100ml.
